

BLOKUP

glass block specialists

High density housing and smaller building blocks mean that many windows look out on to a fence or another wall, or worse still, directly into a neighboring window.

Glass bricks are the perfect answer providing both natural daylight and privacy. Glass bricks offer vastly superior thermal performance to reduce summer heat gain and conserve winter warmth compared with traditional windows.

Today's glass bricks come in a variety of sizes, patterns, shapes, colours and textures. Blokup's all aluminium installation system enables even a non-specialist installer to create beautiful, light transmitting, architectural features within a home or commercial building.

DESIGN

Only Blokup have taken glass bricks one step further than merely a fixed section of wall to create an opening glass block window. Utilizing thinner, lighter "wafer" glass bricks to provide light, privacy, better thermal performance and excellent cross ventilation. Unlike acrylic bricks, true glass bricks do not lose their clarity over time.

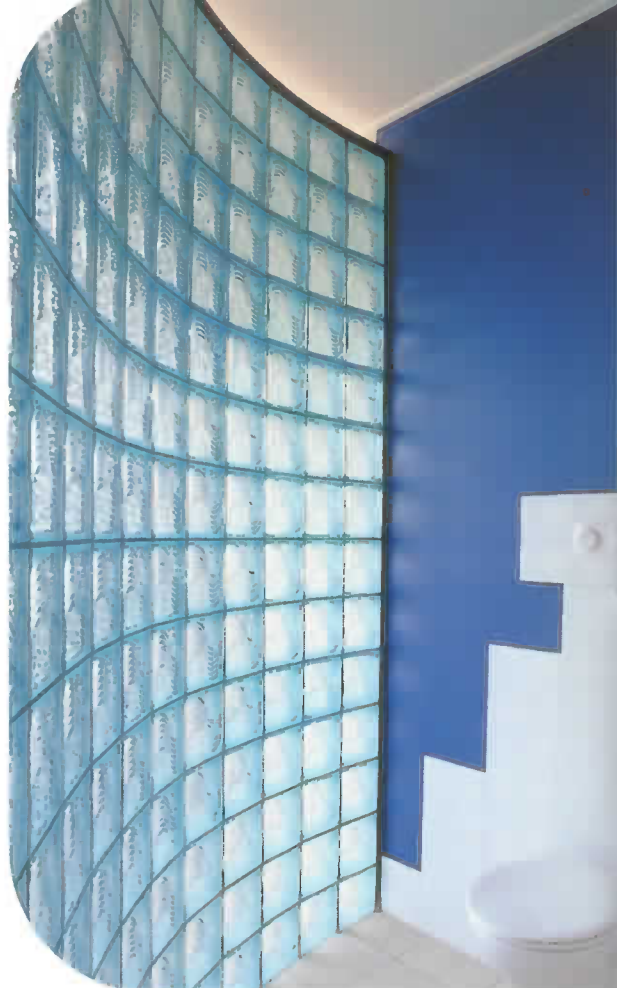

Two styles are available, an awning window hinged at the top and opening outwards from the bottom, or a traditional casement window that opens sideways.

FEATURE WALL

FRAMELESS SYSTEM

This system provides all the advantages of the Blokup system without an aluminum frame. The telescopic anchor discs permit well-constructed frameless installations without sacrificing strength or stability. The Blokup frameless system can be easily adapted to any opening in the home or in the office.

FRAMELESS SYSTEM

Our patented Blokup system is so easy to use that almost anybody can create a fantastic looking finished product all by themselves. By following a simple process, you too can achieve a professional finish to your glass brick project without having to pay for someone else to fit it. Don't limit your plans to just having a wall or window, because the Blokup system lets you use glass bricks to build not only feature walls but fixed furniture pieces such as bars or kitchen benches.
